

!

*How quickly can you say the factor pair of a number? For example, when you see the number 10, do you immediately think of “two times five”? Starting with the number 4, name a factor pair for each of the following products. Use only the numbers 2—9 for your factor pairs. For each of the middle numbers (12—36), you must name two factor pairs. Work with a partner to see how far you can get in sixty seconds. Ready? Go!*
